Issue with Launching MagicPlot on Some Versions of Mac OS X 1

Issue with Launching MagicPlot on Some Versions of Mac OS X

On some versions of Mac OS X MagicPlot fails to start. You will see splash screen with hat logo but the program window does not appear.

If running from the command line such error message appears:

```
LSOpenURLsWithRole() failed with error -10810 for the file MagicPlotPro.app
```

Solution:

Set execution permission for file:

```
MagicPlotPro.app\Contents\MacOS\JavaApplicationStub
```

We are working on fix for this problem.
