# Introducing MagicPlot 1.4

Coming in February 2011

## More Powerful Import Dialog

We have slightly improved table import dialog:

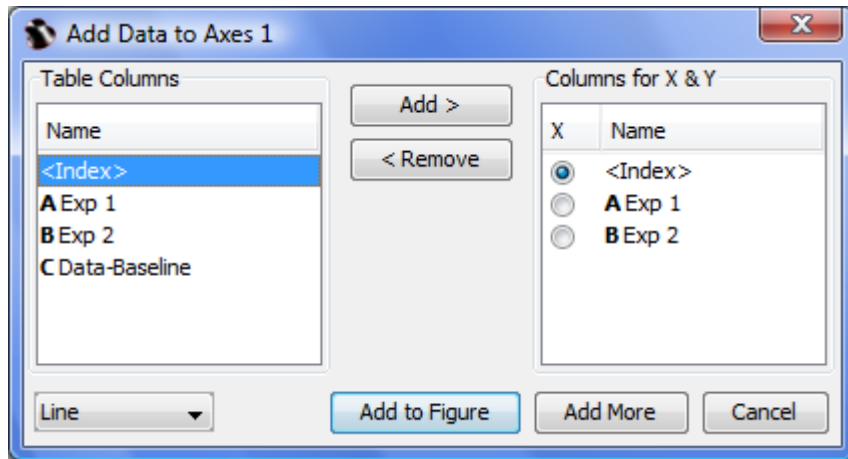

- Character encoding setting
- Reading column names from file
- Setting Y error column
- Importing from clipboard

## Improved 'Add to Figure' Dialog

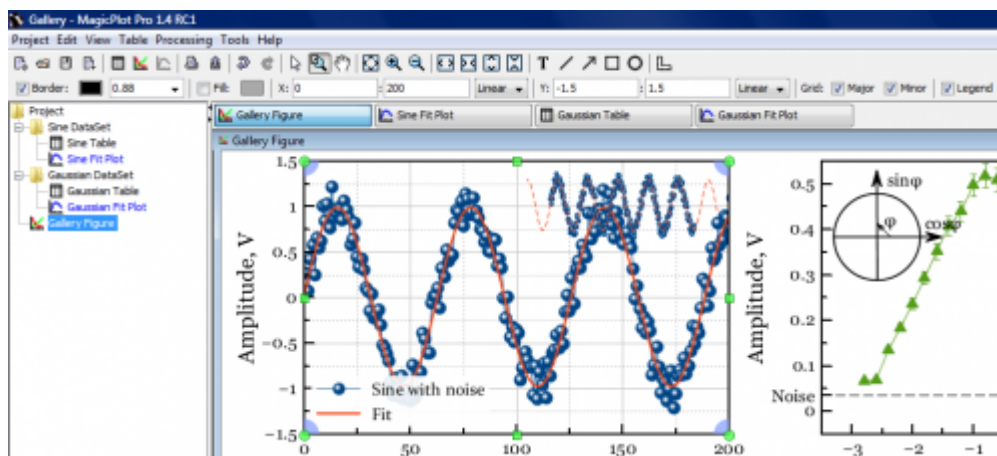

This dialog is used to add Table data to a Figure. In new version you will be able:

- Specify index column (row number) as X
- Add multiple Y column for one X column
- Click 'Add More' button instead of 'Add to Figure' and select other X column

## Specify Exact Axes Scale in Main Window

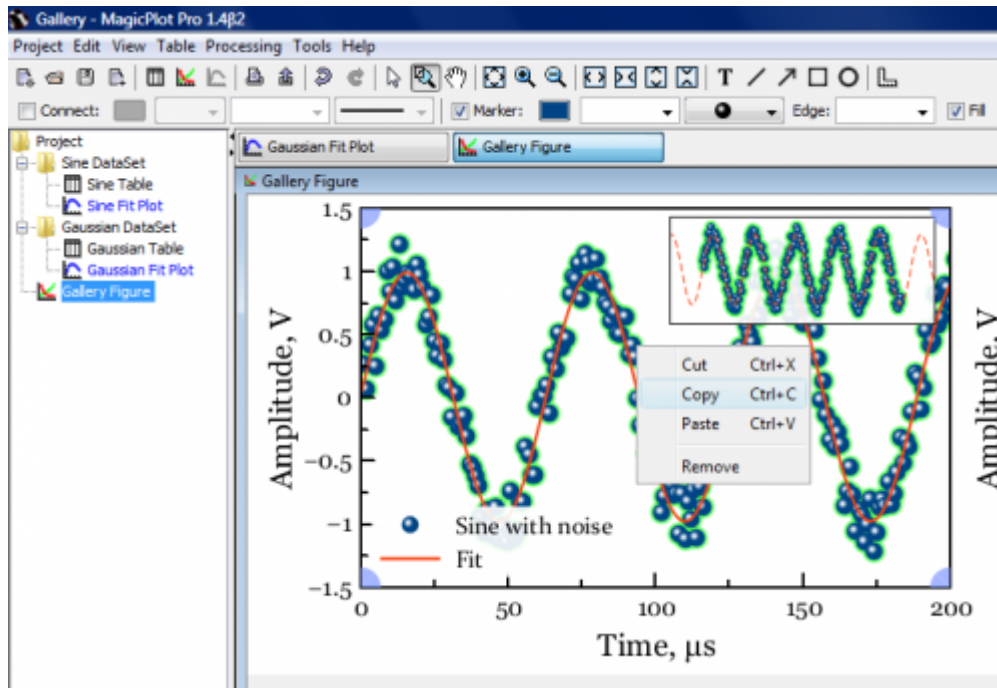

Now you can set exact scale values in Inspector panel without opening properties window. Just select the axes!

## Selecting Curves, Setting Style and Clipboard

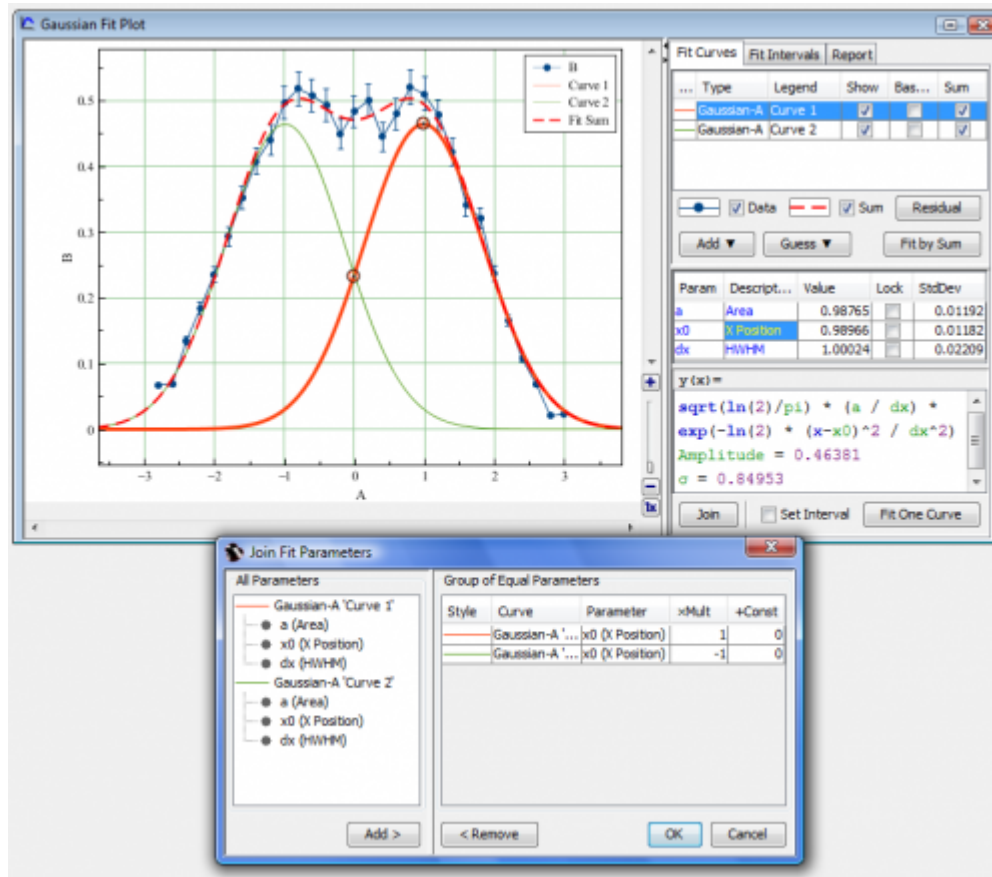

Curves are now selectable and you can:

- Edit style of multiple selected curves with one click
- Cut, copy, paste or remove selected curves via context menu

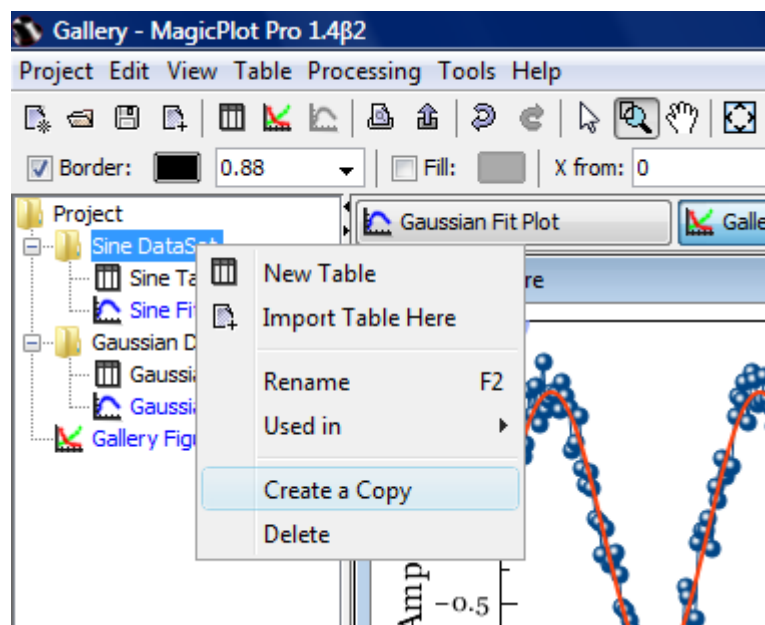

## Joining Fit Parameters with Linear Dependency

Now you can specify that two or more parameters of different fit curves are equal or proportional

# Creating Copies of Tables, Fit Plots, Figures and Folders

You will be able to create a copy of selected objects. Create a copy of a Figure and than modify it!
