MagicPlot Calculator

MagicPlot Calculator is a useful formula calculator embedded in MagicPlot (Pro edition only). To open calculator use Tools→Calculator menu item. MagicPlot Calculator can also be used as free standalone software application. You can download it [here](#)

MagicPlot Calculator uses the same [formula syntax](#) as other formula fields in MagicPlot application. Unlike other formula fields calculator supports comma (,) as decimal separator ($1.2 = 1,2$), so use semicolon (;) as function arguments separator: $\min(1;2)$. MagicPlot Calculator supports user-defined variables.

- Type $(12+4)*\sin(\pi/2)$ and press Enter to get the result
- Type $a=5$ to set variable a to 5
- Use Up/Down keys to recall previously entered expressions
- Use ans (Ans) variable or press Ctrl+Up to insert the result of latest operation
- Standard functions and variables (sin, cos, pi, e, etc.) are supported
