Export Vector Images 1
Fonts embedding in EPS and PDF 1
Non-Latin symbols 1

Export Vector Images

The following vector graphics formats are supported (MagicPlot 1.04):

- pdf
- eps
- emf

To export Figure or Plot image click on `File-Export Image` menu item or use corresponding tool bar button.

You can set the various options of export file format by clicking on `Format Options` button in `Export Image` dialog window.

Fonts embedding in EPS and PDF

There are three options of text drawing and text embedding in vector graphics files EPS and PDF:

- Embed font type 1 – recommended for Latin letters
- Embed font type 3
- Draw text as shapes – recommended if non-Latin symbols are not drawn properly

Non-Latin symbols

If you write text labels (e. g. axis titles) using non-Latin symbols (e. g. Cyrillic letters), embedding these symbols from font may not work. If you have trouble with export of non-Latin letters please set `Draw text as shapes` check-box in `Format Options`.
