# Set Column Formula

Use Table → Set Column Formula menu item to open column formula dialog window.

See [formula syntax](#).

## Row Index

Variable *i* contains the current row index. Rows are enumerated from 1.

## Rows Evaluation Order

Rows are always evaluated one after another from the first to the last in the specified range. Accordingly the row number *i* is incremented after each step.

### Example

- You can use this behaviour to calculate `Wfactorial`: set 1 in the first row of column A and after that set formula `cell(A, i-1) * i` and rows interval from 2 to 100. Note that formula is to be set for rows beginning from the second, and not from the first. You will get the factorial of row number (*i*).

## Using Table Data

There are two functions to obtain current table cell values in formula:

- `col(A)` - returns the value of cell in column 'A' in the current (i-th) row. Equivalent to `cell(A, i)`.
- `cell(A, 3)` - returns the value in column A and row 3.

You can use either upper-case letters (A...Z, e.g. `col(B)`) or numbers (1, 2, 3, ..., e.g. `col(1)`) in columns numeration in arguments of `col` and `cell` functions.

### Example

- `col(A) + 15 + cell(B, i+1)`

## What is "Not-a-Number returned at row #" Warning?

Some mathematical functions can be defined only on a certain interval. For example, square root (`sqrt(x)`) is not defined for negative numbers (all calculations in MagicPlot are made in real numbers, not complex). Hence if the argument of `sqrt` is negative, a **Not-a-Number (NaN)** is returned. If a NaN value occurs in some part of formula, the result of calculation will also be a NaN, and corresponding table cells will be empty.

The calculations are not terminated if NaN value occurs in some row(s).

In some cases you may want to check if a NaN values occurs in calculations. MagicPlot shows the warning "*Not-a-Number returned at row #*". This row number is the first row in which NaN value was returned. MagicPlot also highlights the function or operator which first produces NaN value.
