Table of Contents

Table 1

Table

In MagicPlot **Table** is used to store numeric data. All tables use floating-point numbers in IEEE 754 double precision format.

Empty cells are equivalent to Not-a-Number values.

Table Context Menu

Many table editing functions are available in table context menu.

Columns Numbers

Columns are enumerated by Latin letters and numbers after *Z*: A, B, C, ..., Z, 27, 28, 29, ...

Moving Columns

Hold `Ctrl` key (on Windows and Linux only) or `Alt` key (on Mac OS X) and drag column header to rearrange table columns. If `Ctrl` / `Alt` keys are not pressed, mouse dragging on header will select the columns.

Editing Table

You can edit table cell by double click on it. You can either enter a number or an expression (e.g. writing `pi` in cell equals to `3.1416…`, writing 1+2 equals to 3).

See Formula section for expression syntax.
