Advanced Typography Features

MagicPlot provides accurate typography in text labels and axes labels. You may toggle some features in 'Typography' tab of MagicPlot Preferences.

Ligatures Support

MagicPlot supports Latin  ligatures in text labels. If you type 'fi', 'fl', etc., those symbols will be shown with ligature glyphs when you exit edit mode.

	Edit mode
	Result

MagicPlot supports the following ligatures:

- fi, fl
- ff, ffi, ffl

Ligature glyphs are included only in some fonts. MagicPlot will display ligatures only if these glyphs are included in used font. You can turn the ligatures off in MagicPlot preferences.

Special Characters

MagicPlot can automatically convert these character sequences to special symbols:

- `--` → [ℳen dash](#)
- `---` → [ℳem dash](#)
- `...` → [ℳellipsis](#)

You can turn this option off in MagicPlot Preferences.

Mathematical Symbols in Axes Labels

The numbers in [ℳscientific notation](#) need two special characters if you want the typography to be accurate: minus sign and multiplication sign. Many graphing software applications which use simplified typography use letter 'x' and [ℳhyphen-minus](#) (-) in numbers instead of typographically correct special characters. This simplified typography was mainly used in old applications which do not support [ℳUnicode](#).

MagicPlot can use either correct symbols (default) or simplified. You can change this option in MagicPlot Properties.

The multiplication sign is different in various languages. In most cases you have to use either '·' or '×' sign. You also can specify any special character or character sequence, for example enter spaces before and after multiplication signs.

1.4×10^{-6}	ℳMultiplication sign (U+00D7) Correct ℳminus sign (U+2212)
$1.4\cdot 10^{-6}$	ℳMiddle dot (U+00B7) Correct minus sign (U+2212)
$1.4x10^{-6}$	Simplified typography: Latin letter 'x' (U+0078) ℳhyphen-minus (U+002D) instead of minus

'U+XXXX' refers to Unicode code point.
